VascularFlow

Spiral Laminar Flow™ technology reinstates the body's natural blood flow pattern.

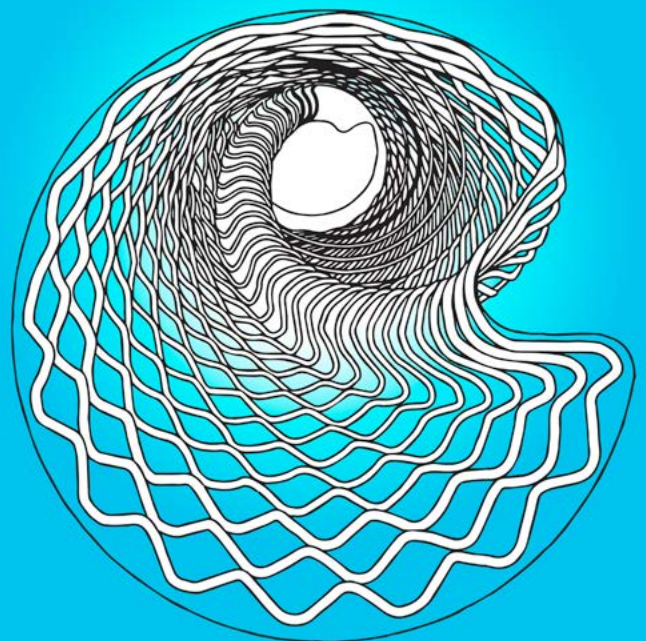

Inducing Spiral Laminar Flow™ through prosthetic implant grafts significantly reduces the turbulence created at the distal end of the anastomosis — improving graft patency and reducing downstream disease progression.

Spiral Flow™ Peripheral Bypass Graft

Spiral Flow™ AV Access Graft

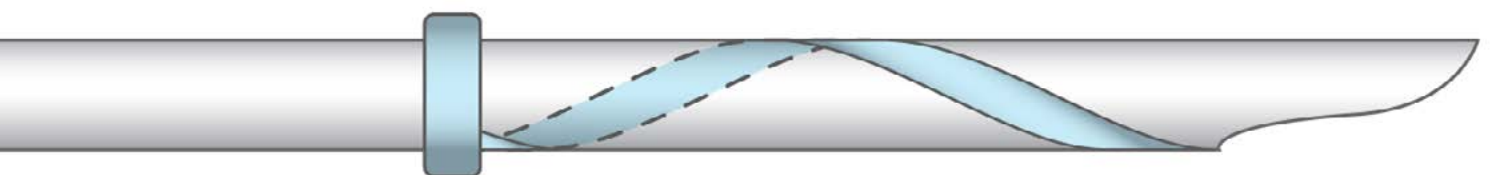

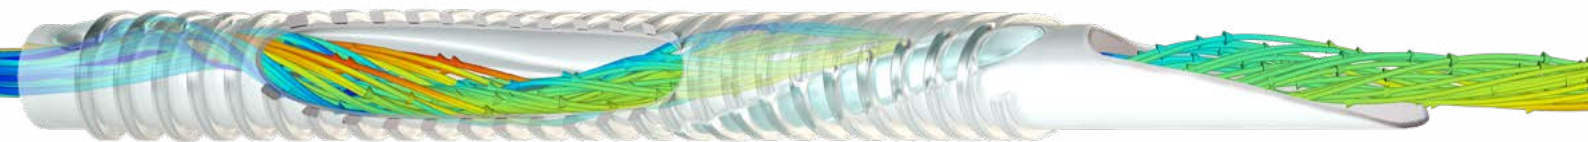

Spiral Flow™ Peripheral Stent

We are the inventors and developers of innovative Spiral Flow™ cardiovascular devices that restore natural blood flow. Our patented platform technology benefits patients worldwide and we are seeking partners to co-develop novel spiral flow devices.

**Vascular Flow are
100% confident
in the benefits
of our Spiral
Laminar Flow
Technology.**

Spiral Flow™ technology brings many benefits including:

- > Reduced turbulence within the blood vessel
- > Reduced wall pressures and stresses
- > Reduced particle adhesion to the vessel wall – the particles are held in the centre of the vessel
- > Improved blood flow through stenoses or blockages.

Spiral Laminar Flow can be integrated into your medical device technology.
